Taxonomy Development Handbook (TDH)

Reference and guidelines for XBRL taxonomy development, implementation, and maintenance.

<https://xbrl.us/xbrl-reference/tdh/>

The screenshot shows the top portion of the XBRL US Taxonomy Development Handbook page. At the top left is the XBRL US logo. Below it is a breadcrumb trail: Home > XBRL References >. The main title is 'XBRL Taxonomy Development Handbook' in orange. Below the title are social media sharing buttons for LinkedIn, Twitter, and Facebook. On the right side, there is a button to 'download PDF' with a link icon and the text 'published Jul '20'. The page is attributed to the 'Domain Steering Committee'. The main heading is 'A Guide for XBRL Taxonomy Developers' with a sub-heading 'Public Release v1.0'. A paragraph describes the handbook as a comprehensive guide for regulators, industry experts, and businesses. Below this is a note about the handbook's development by the XBRL US Domain Steering Committee and its 90-day public review period. There are links for 'HTML', 'Samples, templates and widget taxonomy referenced in this document (.zip)', and a 'Table of Contents' section. The table of contents lists chapters 1 through 9, with sub-sections for each. Chapter 1 is 'Introduction', Chapter 2 is 'An Introduction to XBRL', Chapter 3 is 'Structuring Data', Chapter 4 is 'The Taxonomy', Chapter 5 is 'Machine-readability', Chapter 6 is 'How Does XBRL Represent Data?', Chapter 7 is 'The Importance of Public Exposure', Chapter 8 is 'Documenting a Taxonomy', and Chapter 9 is 'Taxonomy Governance'. Each chapter has a corresponding sub-section listed.

A Guide for XBRL Taxonomy Developers

Public Release v1.0

The Taxonomy Development Handbook (TDH) is a comprehensive guide that directs regulators, industry experts, and businesses through a practical, consistent roadmap to building high quality data standards using XBRL.

This public release was developed by the XBRL US Domain Steering Committee (DSC) and included a 90-day public review period that ended on February 21, 2020.

Table of Contents

1 Introduction	7.4 The Importance of Public Exposure
1.1 Overview	7.5 Guidance
1.2 XBRL US and Its Mission	8 Documenting a Taxonomy
1.3 XBRL: the eXtensible Business Reporting Language	8.1 How to Use This Chapter
1.4 What Is in this Document	8.2 The <i>Taxonomy White Paper</i>
2 An Introduction to XBRL	8.3 The <i>Taxonomy Guide</i>
2.1 eXtensible Business Reporting Language	8.4 The <i>Preparer Guide</i>
2.2 How Does XBRL Represent Data?	8.5 The <i>Data Consumer Guide</i>
2.3 Machine-readability	8.6 Updates and Release Notes
2.4 The Taxonomy	9 Taxonomy Governance
3 Structuring Data	9.1 The Taxonomy Lifecycle

Chapter 9: Taxonomy Governance

- Chapter 9 is a general guide to the process of managing the development and maintenance of a taxonomy
- Discussion of:
 - Pilot Program
 - Taxonomy Build
 - Implementation
 - Ongoing Support and Maintenance

9 Taxonomy Governance

As with any project, the lifecycle and workflow of a taxonomy will naturally include development, deployment, and eventually revision and support. These later aspects of the lifecycle are sometimes less investigated or emphasized, but they can be vitally important to the success of any project, an XBRL taxonomy included. This chapter offers some methods of oversight and management to guide the entire process of taxonomy development, implementation, and upkeep. These are only suggestions; developers and other managers should create and install a management structure that makes sense to them.

Taxonomy *governance* pertains to the policies, processes, and documentation needed to manage taxonomies, not only in the initial building stage but throughout ongoing support and maintenance. A taxonomy is seldom "finished" because regulatory reporting requirements, industry and company needs, and marketplace technologies continuously change. The taxonomy must evolve to meet the needs of the reporting domain and to embrace new technologies that can offer enhancements to the information supply chain.

The overarching goal of taxonomy governance is to establish a repeatable, predictable process to manage taxonomy changes in a manner that is accountable and transparent to all stakeholders. This chapter briefly outlines the development cycle for a taxonomy. It also describes the team of personnel that could be involved in governance tasks, as well as their roles and responsibilities. It bears mentioning again that the size and scope of governance and the groups involved in it should be dictated by the size and scope of the taxonomy project itself. For a large, complex taxonomy with multiple regulatory stakeholders, governance may require many different people with different expertise. For a small taxonomy with a more contained information supply chain, the taxonomy developers themselves may be all that is necessary to maintain robust governance.

9.1 The Taxonomy Lifecycle

Like most structured systems, taxonomies have a general lifecycle: build, pilot, implementation, and support and maintenance. The governance structure and goals should adapt to the stage of taxonomy development and maintenance (Figure 9-1).

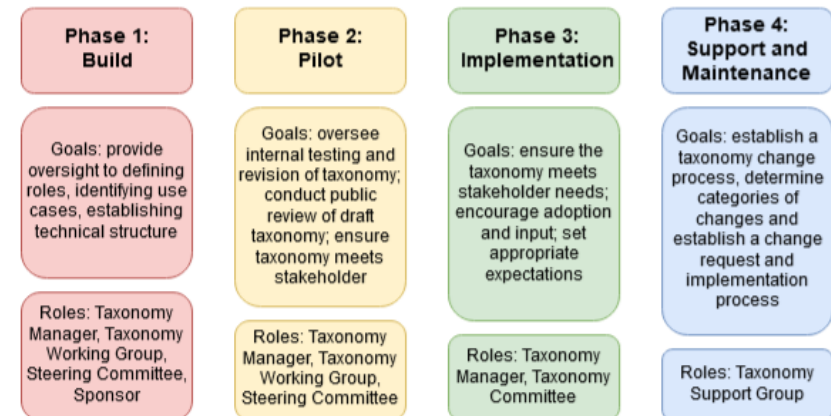

Figure 9-1. The lifecycle of taxonomy development and governance

Note that these phases correspond with the development workflow diagram depicted in Figure 7-1. The development and revision cycles in that diagram match the phases listed in this chapter. The following sections outline the goals of each phase and types of governance structures necessary to achieve them.

Taxonomy Governance Phases

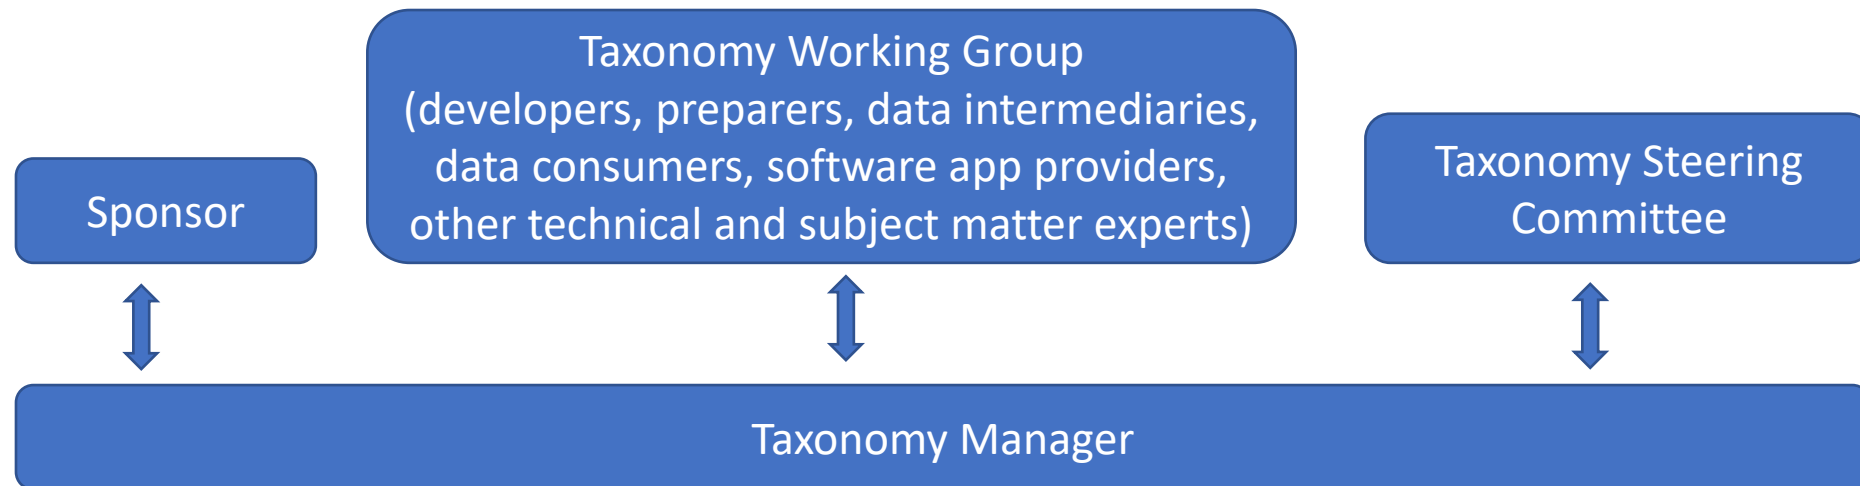

- Goal: establish repeatable, predictable process to manage taxonomy changes

Phase 1

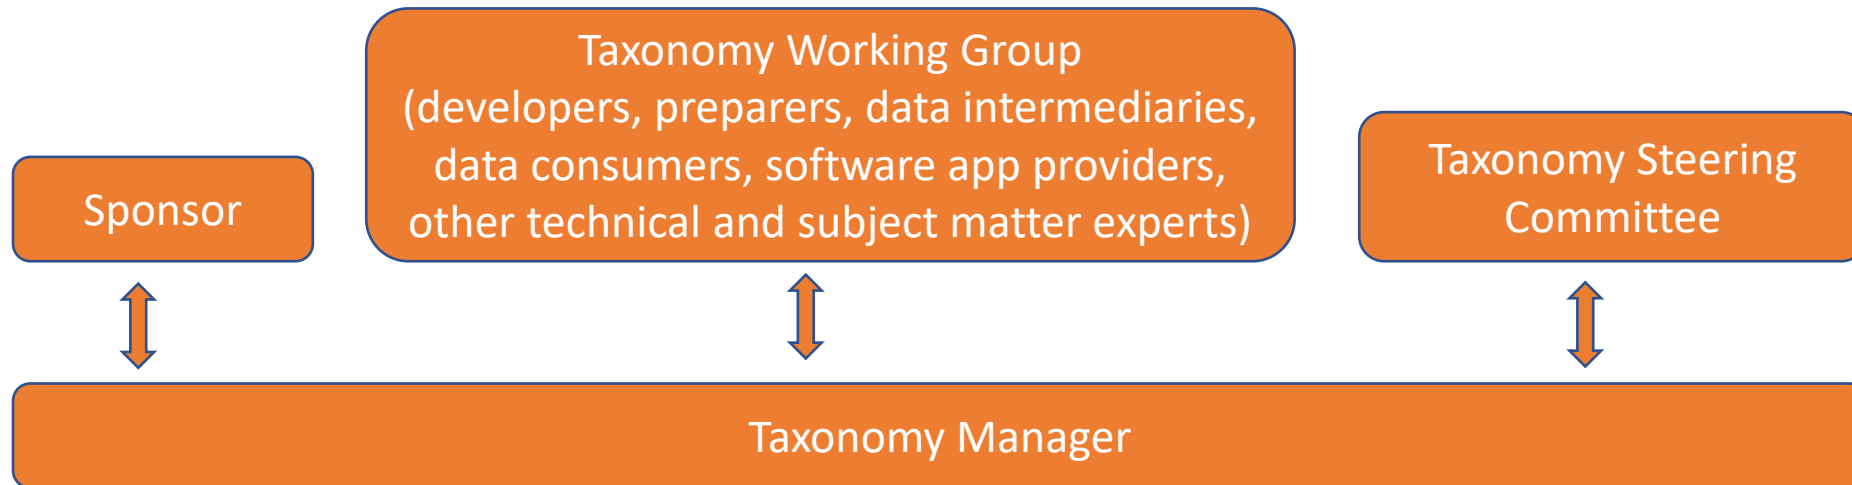

- Goals: provide oversight for defining roles, identifying use cases, and establishing the technical structure; produce a pilot taxonomy for public review
- Organizational roles:

Phase 2

- Goals: oversee internal testing and revision of taxonomy; conduct public review; ensure taxonomy meets stakeholder needs
- Organizational roles:

Phase 3

- Goals: ensure the taxonomy meets stakeholder needs; encourage adoption and input; set appropriate expectations
- Organizational roles:

Phase 4

- Goals: establish a taxonomy change process; determine categories of changes and establish a change and request implementation process
- Organizational roles:

Taxonomy Development & Maintenance Group

CPE questions

Who was involved in the initial development of the US GAAP taxonomy?

What role did the FASB play?

When did the FASB take over the development and maintenance of the US GAAP Taxonomy?

What was the initial development and maintenance process put in place by the FASB?

How and why has the US GAAP Taxonomy development and maintenance program changed over time?

What governance and process does the FASB follow to develop and maintain the taxonomy for accounting standards?

Taxonomy Exposure Draft Process

Accounting Standards Update (ASU) Exposure Process

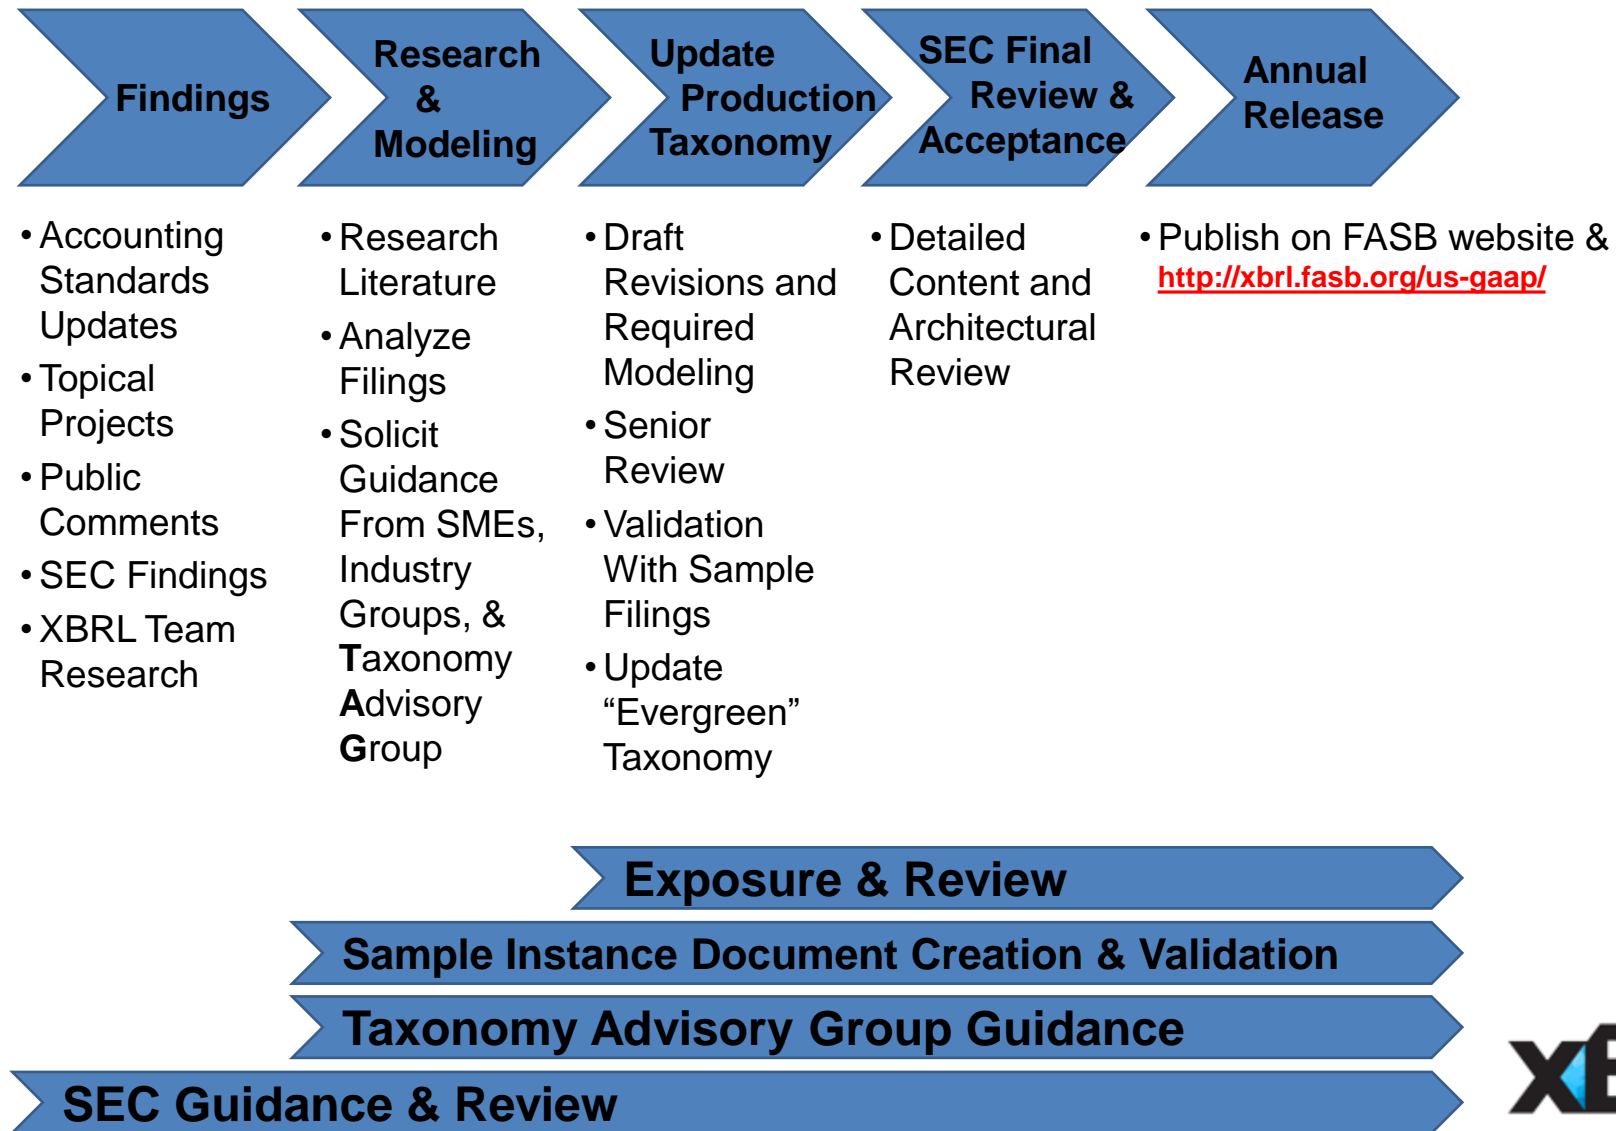

Taxonomy Exposure Draft (TED) Process

FASB Taxonomy Development Process

How does the FASB XBRL team incorporate XBRL technical changes to the taxonomies, and how does the governance structure support that?

Select Previous Enhancements

- Typed dimensions
- Reference roles
- Taxonomy Implementation Notes
- Change Notes
- Extensible Enumerations 2.0
 - DTR

How does that differ from the FDIC program? The FERC program?

Is one approach better than another? Why?

How does the FASB process compare to the IASB development and maintenance process?

What kind of guidance and support tools for the US GAAP Taxonomy are available to issuers?

FASB XBRL US DQC RULES TAXONOMY

The FASB XBRL US DQC Rules Taxonomy (DQCRT) is an XBRL representation of select [XBRL US Data Quality Committee's \(DQC\) validation rules](#) that is now included with the annual U.S. GAAP Financial Reporting Taxonomy release.

The DQCRT is uniquely structured from the typical design of XBRL taxonomies because it is narrowly focused on conveying the DQC validation rules, predominantly for regulator use. It is not intended to be used in Securities and Exchange Commission (SEC) filers' extension taxonomies the way that the U.S. GAAP Financial Reporting Taxonomy or the SEC's Document and Entity Information (DEI) Taxonomy is used. To use the DQC validation rules, there are resources available at the [XBRL US DQC website](#) or contact your service provider.

The DQCRT contains a subset of the DQC rules. FASB Taxonomy Staff evaluate the validation rules for inclusion in the DQCRT that have been available for use for more than a year, with consideration for how the DQC addressed any feedback received on a validation rule.

The 2021 DQCRT can be accessed through the entry point provided below:

- [2021 XBRL US DQC Rules Taxonomy](#)

The 2020 DQCRT can be accessed through the entry point provided below:

The 2021 US GAAP Financial Reporting Taxonomy can be accessed through the entry point provided below.

- [2021 US GAAP Financial Reporting Taxonomy](#)

The 2021 U.S. GAAP Financial Reporting Taxonomy (GRT) contains updates for accounting standards and other improvements since the 2020 Taxonomy as used by issuers filing with the U.S. Securities and Exchange Commission (SEC). We encourage all interested parties to review and provide feedback through the FASB Online Review and Comment System.

Comments are acknowledged when received but it is not possible to respond directly to individual comments. Individuals providing comments on the GRT are required to register with a "user name" and email address. Please note that all comments will be visible to other registered users. Guidance for using the taxonomy viewer/commenting tool is provided [here](#).

Guidance and Supporting Documents include:

- [2021 US GAAP Financial Reporting Taxonomy Release Notes \(Narrative only\)](#)
Narrative summary of taxonomy improvements since 2019 release
- [Modifications to the 2021 US GAAP Taxonomy \(Excel Version\)](#)
Taxonomy improvement details since 2020 release in spreadsheet format.
- [FASB Extension Taxonomy Change Application \(TC App\)](#)
This application helps users quickly identify changes in the elements that are used in an existing XBRL extension taxonomy resulting from a new Taxonomy release. Save and unzip the TC App to a local drive and follow instructions in the [User Guide](#) contained therein.
- [2021 US GAAP Taxonomy \(Excel Version\)](#)
Taxonomy in a spreadsheet format to facilitate taxonomy review.
- [2014 US GAAP Financial Reporting Taxonomy Architecture](#)
Explains the taxonomy design rationale and how the architecture satisfies stakeholder requirements. No change from 2014.
- [2021 US GAAP Financial Reporting Taxonomy and Data Quality Committee Rules Taxonomy Technical Guide](#)
Provides technical details of the taxonomy.
